INTRUSION DETECTION

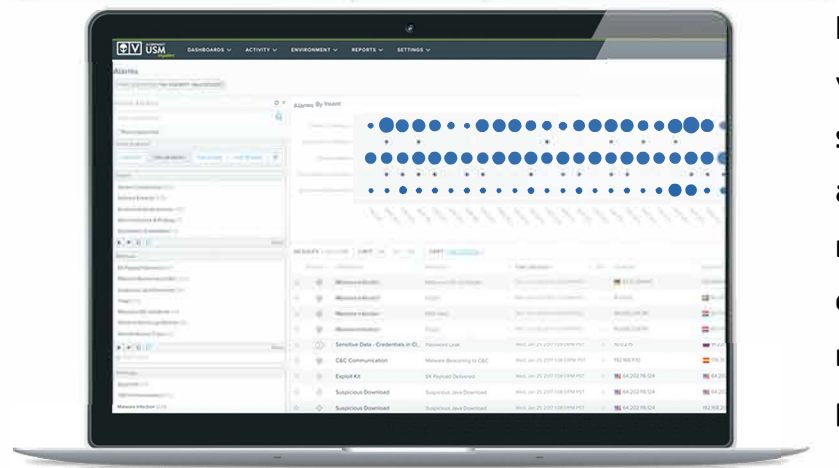

INTRUSION DETECTION SYSTEMS

Securely Yours provides cutting edge intrusion detection systems for your IT Assets, allowing you to detect potential threats as they arise. Our solution allows you to collect and correlate events from your existing IDS/IPS into a for comprehensive security visibility while protecting your IT assets.

HOST INTRUSION DETECTION SYSTEMS (HIDS)

(HIDS) enable you to analyze system behavior and configuration status to track user access and activity. This allows you to detect potential security exposures such as system compromise and changes to critical configuration files (e.g. registry settings, /etc/passwd), common rootkits, and rogue processes.

NETWORK INTRUSION DETECTION SYSTEM (NIDS)

NIDS enables you to detect threats targeting the vulnerabilities within your systems with signature-based anomaly detection and protocol analysis technologies. NIDS sensors collect data from multiple on-premises applications, systems, and devices to recognize the newest attack methods, malware infections, system compromise techniques, policy violations, and other exposures.
